Contents

Introduction	xiii
1 UNIFIED FIELD THEORY	
<i>The Challenge of the Unified Field</i> ; Einstein's efforts to unify electrodynamic and gravitational theory; unification of force rather than field	1
<i>The Electrodynamic Force</i> ; self-action of interacting moving charge with energy conservation; reaction to avoid self-induced angular momentum	3
<i>The Neumann Potential</i> ; electrodynamic interaction between two moving electric charges; analysis of their vector component interactions	7
<i>The Law of Electrodynamics</i> ; general three-component law of force; Maxwell's empirical laws of electrodynamics; anomalous ion acceleration; Trouton and Noble experiment	11
<i>Inverse-Square Laws of Force</i> ; empirical analysis of spatial energy distribution; the two alternative forms of distribution	17
2 GRAVITATION AND MAGNETISM	
<i>Retardation</i> ; spatial energy distribution in Coulomb interaction; retardation effects due to finite speed of energy transfer	23
<i>The Law of Gravitation</i> ; derivation of Einstein's law of gravitation; Mercury's perihelion anomaly; Gerber's 1898 space-time gravitation propagation hypothesis	27
<i>Electromagnetism</i> ; displacement theory; Ampère formula; retardation of electrodynamic field action	30

<i>The Gyromagnetic Reaction</i> ; nature of magnetic energy; free electron diamagnetism; half-field reaction and the gyromagnetic anomaly	36
<i>The Graviton</i> ; Dicke's terminology; electrodynamic basis for gravitational action; role of graviton; formulation of G	40
3 THE STRUCTURE OF THE VACUUM	
<i>Cosmic Radiation Anisotropy</i> ; electromagnetic and cosmic frames of reference; aether drag; Lodge experiment; Sagnac experiment; Michelson and Morley experiment; Earth rotation; Michelson, Gale and Pearson experiment; Townes maser experiment	47
<i>The Transverse Doppler Effect</i> ; Fitzgerald contraction; Kennedy and Thorndike experiment; time dilation; Ives and Stilwell experiment; thermal red shift; equivalence of mass and energy	59
<i>Aberration</i> ; Fresnel formula; lateral deflection of light; linear versus rotary motion; rotation of vacuum structure; Champeney experiment	64
4 THE ROLE OF ENERGY	
<i>Relativistic Mass Increase</i> ; Jeans 1904 mass-energy transmutation proposition; $E = Mc^2$	70
<i>Energy Radiation</i> ; paradoxical aspects of classical radiation by accelerated charge; breakdown of space-time laws within an electron; Pauli non-radiation hypothesis; Schott energy; conflict with quantum theory	74
<i>The Energy-Mass Formula</i> ; Einstein analysis; Hasenohrl trapped radiation inertia hypothesis; Thomson derivation of Larmor formula; effect of accelerating field; non-radiation inertia hypothesis	80
<i>Charge Equivalence</i> ; Rowland experiment; Einstein dependence upon Maxwell theory; Schuster-Wilson hypothesis; meaning of c in $E = Mc^2$	84

5 QUANTUM MECHANICS

- Universal Time*; rhythmic nature of microcosmic world according to Einstein, Schroedinger and Dirac; C and G frame hypothesis; lattice particles of the structured vacuum 87
- Planck's Law*; Heisenberg Principle of Uncertainty; electron spin; lattice rotation; photon units; derivation of $E = h\nu$. 90
- The Schroedinger Equation*; derivation of the Schroedinger equation; determination of standard photon unit angular momentum 96
- The Electron g-factor*; derivation of the anomalous g-factor of the spin magnetic moment of the electron 99

6 THE VACUUM PARTICLES

- The Lattice Particles*; particle mass formula; analysis of vacuum structure; determination of photon unit structure; derivation of fine structure constant in terms of lattice geometry; determination of mass of lattice particle 103
- The Virtual Electrons and Positrons*; conservation rules relating to energy, space and charge; lattice particle interaction with electrons and positrons; numerical determination of dimensionless fine structure constant; the dimuon energy quantum; graviton decay processes and empirical derivation of 2.587 Gev graviton mass; evaluation of G 110
- The H-particles*; energy formulation for charge pairing; the derivation of proton-electron mass ratio; charge interaction stability; pair creation stability; the psi particles; experimental evidence of graviton energy quantum 115

7 PARTICLES OF MATTER

- The Deuteron*; quark theory; deuteron structure; confirmation of Thomson mass-energy formula for electron; deuteron binding energy; ground state separation 123
- The Proton*; the structure of the proton; deuteron decay; polarity inversion; inversion energy loss; evaluation of end point energy of beta spectrum in neutron decay 128
- The Pion*; particle reactions leading to pion creation; evaluation of pion-electron mass ratio 133

<i>The Muon</i> ; evaluation of muon-electron mass ratio; evaluation of muon anomalous g-factor; proton spin magnetic moment; evaluation of muon lifetime at rest; muon lifetime as a function of speed	136
<i>Quarks</i> ; particle creation by half-synthesis process; the creation of the 2.587 Gev graviton; multiple charge quarks; the neutral pion; the MacGregor quarks	149
8 THE COSMIC WORLD	
<i>The Solar System</i> ; cyclic gravitation in relation to vacuum structure; the creation of the sun; satellite formation; the Earth-moon system	156
<i>Cosmic Space</i> ; induction of charge by vacuum rotation; induction of magnetic fields by vacuum rotation; mass density of lattice structure	159
<i>Space Domains</i> ; gravitational potential and angular momentum of vacuum medium; source of stellar angular momentum; domain structure in space; charge reversal at boundaries	164
<i>Geomagnetism</i> ; evaluation of geomagnetic moment; geomagnetic field reversals; geological evidence of space domains; G variation linked with galactic motion	168
9 GENERAL DISCUSSION	
<i>The 2.7° Cosmic Background</i> ; black holes; time reversal theory; temperature of the space lattice in terms of local gravitational potential	175
<i>Gravitational Potential</i> ; spatial distribution of gravitational interaction energy	177
<i>The Gravitational Deflection of Light</i> ; depletion of lattice particle energy by local gravitational potential; effect on speed of light	180
<i>The Clock Paradox</i> ; flying clock experiment; Pound and Rebka experiment	182
<i>Mass-energy Equivalence</i> ; interaction energy; spectral emission; the problem of the universal equivalence of mass and energy	184

CONTENTS

xi

<i>Moving E-frames; lattice structure in motion; free particles in reverse flow; distinction between rotation and linear motion; energy of rotating vacuum lattice system; ball lightning; Tunguska; tornadoes</i>	185
<i>The Hadron Ether; graviton as hadronic vacuum particle; critical energy quanta of vacuum at 38 kev and 2.587 Gev; Goldstone bosons and Higgs scalar</i>	190
<i>Importance of Unification; the question of fusion; need for electrodynamic law; enigma</i>	192
APPENDIX I Uniform Charge Induction in Self-gravitating Electron-Proton Gas	195
APPENDIX II The Angular Momentum of the Solar System	197
APPENDIX III The Fine Structure Constant	199
EPILOGUE	201
INDEX	203
